Position: Industrial .NET Software Engineer / Programmer

Location: Nashua, NH

Job Description and Primary Requirements:

Seeking a software engineer with .NET experience developing industrial applications. Successful candidate will have experience with C and Microsoft.NET in a manufacturing environment to create custom applications for batches, recipes and production data. Our clients are typically manufacturers in the process industries including chemical, energy, pharmaceutical, food & beverage, medical devices. This position requires the ability to work with minimal supervision, effective organizational skills and the ability to successfully execute multiple project responsibilities. Candidates need to possess excellent communication and interpersonal skills. Maintaining long term client relationships is a key to success. Travel will be required to attend meetings at client's locations, installation support, acceptance testing, start-up, and on-going service. Frequency and length of travel is project specific. Most projects are located in the greater Northeast, however nationwide and foreign travel may be required.

Experience and Minimum Qualifications:

- Working knowledge of database design and stored procedures with Microsoft SQL Server, Oracle, MS Access
- Working knowledge of report generation from databases using Crystal Reports or similar
- Working knowledge of OPC
- Working knowledge of process control historians
- Education: BS in Computer Science or Engineering
- Minimum of 5 years programming experience and basic project management skills
